DETAILED ACTION

Information Disclosure Statement

The information disclosure statement filed November 28, 2003 fails to comply with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609 because applicant gives no references to consider. It has been placed in the application file, but the information referred to therein has not been considered as to the merits. Applicant is advised that the date of any re-submission of any item of information contained in this information disclosure statement or the submission of any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the statement, including all certification requirements for statements under 37 CFR 1.97(e). See MPEP § 609.05(a).

Allowable Subject Matter

Claims 1-27 are allowed. The following is an examiner's statement of reasons for allowance: McCurry (U.S. Pub No. 200100398819) teaches door key retention device for a door, comprising: a lock for the door, said lock having a locked position, an unlocked position, and a key for moving said lock from a locked position to an unlocked position when it is inserted in said lock, which key can be withdrawn from said lock

Art Unit: 2835

when the lock is in the locked position, but cannot be withdrawn from said lock when the lock is in an unlocked position. McCurry does not teach the door being provided with power so that it can be opened and closed only when the lock is in the unlocked position nor does McCurry teach the device prevents the lock from being returned to the locked position unless the door is closed. These further limitations are not taught or rendered obvious by the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Charbonneau et al. (U.S. Pat. No. 5,237,843) teaches a device similar to that of McCurry where Charbonneau's apparatus is not used on a powered door nor is the position of the door considered. McHeffery (U.S. Pat. No. 4,074,462) teaches a window locking system where the window may be lock in multiple positions, Gerlach (U.S. Pat. No. 4,120,184), Mullich et al. (U.S. Pat. No. 4,300,374), Austin et al. (U.S. Pat. No. 3,906,762) and Eden (U.S. Pat. No. 5,970,761) teach devices which trap and retain the key to a lock, Barrle (GB 2388154A) teaches locking device wherein the key may is retained in the lock and may only be removed when the user is on the other

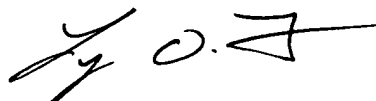

side of the door however the position of the door is not taught to be considered before the release of the key from the lock.
